

# WIPRO NGA Program – EP\_Java Fullstack Batch

Capstone Project Presentation – 11 July 2024

Project Title – AmazeCare HealthCare Application

Trainer - Javeed Mohammed Husnuddin

Presented by - Joshnitha Rangolu  
Madhuri Kuramarpu  
Jahn timer Narina  
Murali Gandikota

# Agenda

- Conclusion

# Introduction

## **Problem statement:**

In this case study, we have design and developed a fullstack healthcare application called " AmazeCare" which aims to streamline patient management and improve healthcare services in a medical facility. The application will facilitate the interaction between patients, doctors, and administrative staff, ensuring efficient appointment scheduling, medical record management, and communication

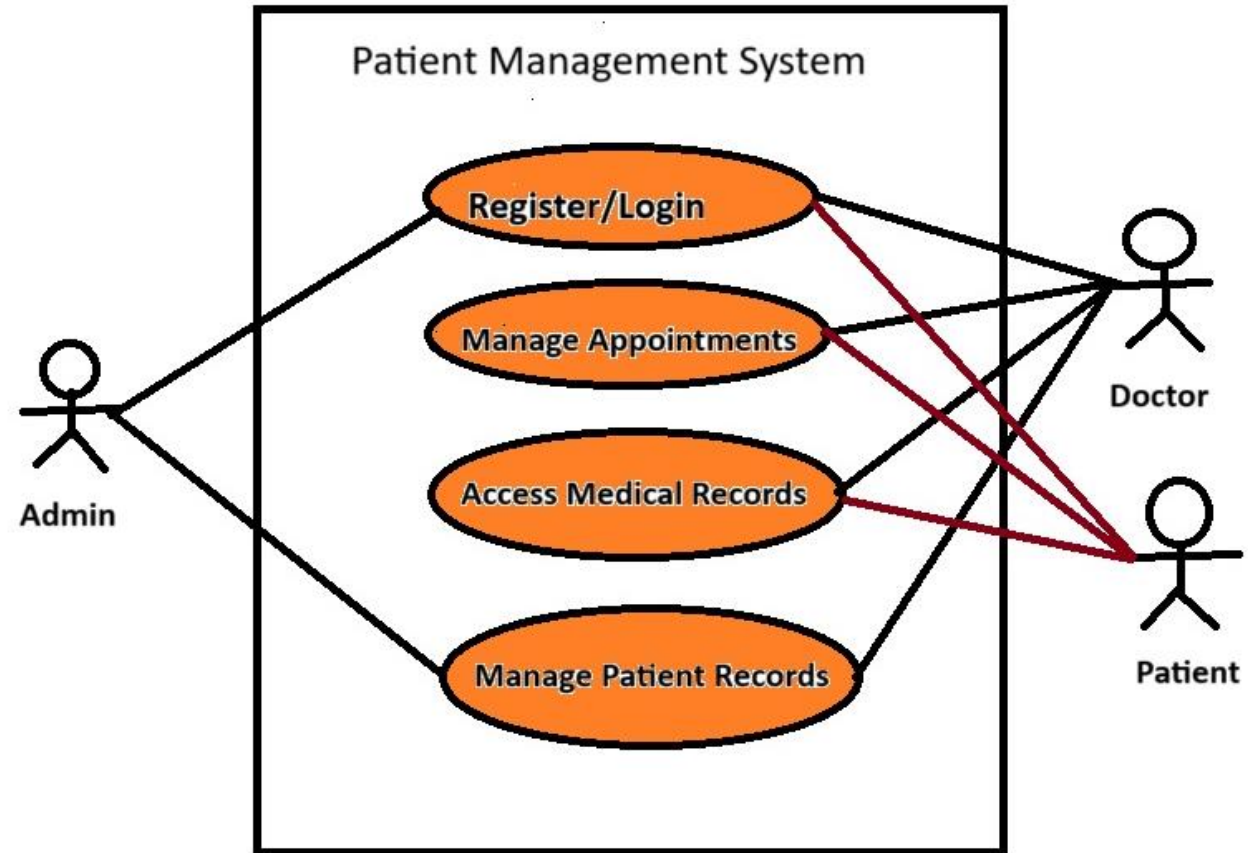

# Scope

- **Efficient Appointment Booking:** Enable patients to schedule appointments online, reducing waiting times and improving overall patient experience.
- **Comprehensive Medical Records:** Store and manage patient medical records electronically for easy access by healthcare providers.
- **Real-time Communication:** Allow patients and doctors to communicate securely through the platform, enabling follow-up discussions and quick responses to queries.
- **Administrative Automation:** Simplify administrative tasks such as handling medical records, staff records.

# Technologies Used

- Frontend : Angular  
HTML  
CSS  
Bootstrap
- Backend : Java  
Spring Boot
- Database : Mysql
- Authentication : JSON Web Tokens(JWT)

# Use case Diagram

# Use Cases

Actor: **Patient**

- Use Case: Register as a new patient
- Use Case: Log in as an existing patient
- Use Case: Update personal information
- Use Case: Schedule Appointment
- Use Case: View Medical History
- Use Case: View Appointments
- Use Case: Cancel Appointment

## Actor: **Doctor**

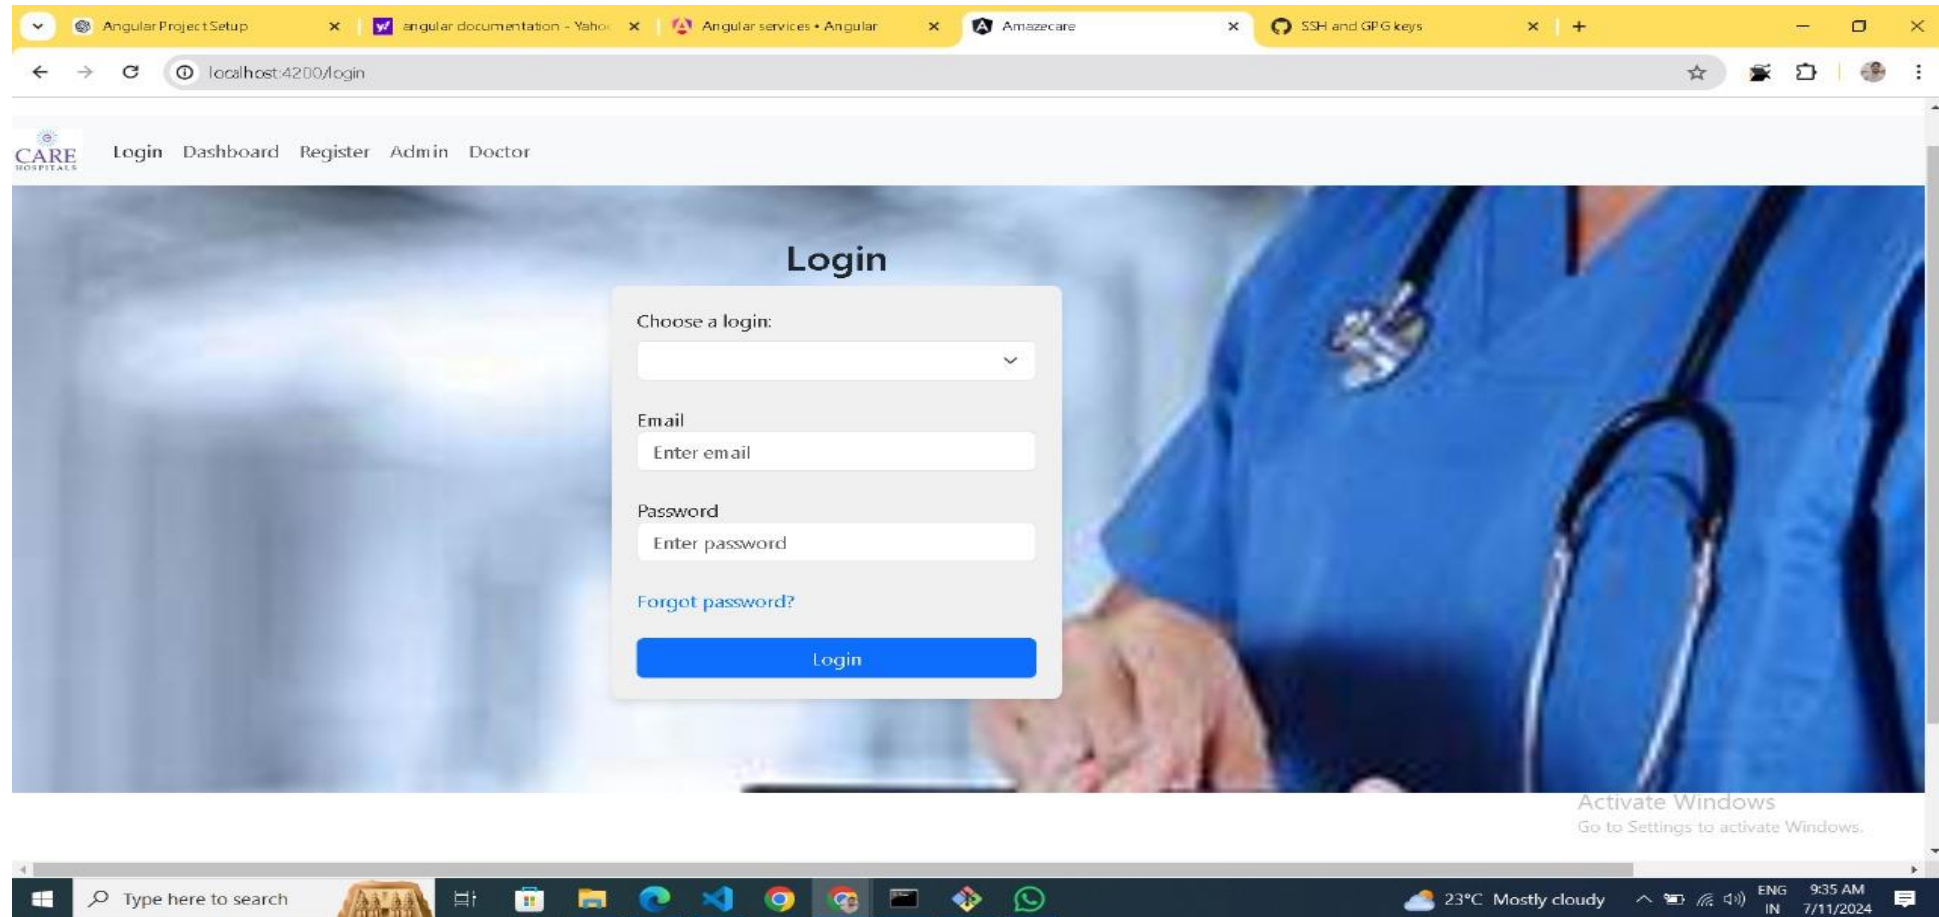

- Use Case: Log In as an existing Doctor
- Use Case: View Appointments
- Use Case: Conduct Consultation
- Use Case: Update Medical Records
- Use Case: Prescribe Medications

## Actor: **Administrator**

- Use Case: Log In
- Use Case: Manage Appointments
- Use Case: Manage Doctors
- Use Case: Generate Reports(As simple list view)

| John Doe     | 123-456-7890 | 10:00 am | Fever, Cough | <a href="#">Consult</a> <a href="#">Cancel</a> |

# Conclusion

In conclusion, the development of the hospital management system using a Java full stack approach has successfully addressed the key objectives of improving patient care and operational efficiency. Leveraging Java for backend robustness, along with a modern front-end framework, the system provides a seamless and responsive user experience. The integration of secure database management ensures reliable storage and retrieval of sensitive medical data.

# Thank You!
